

Syed Aamair Shareef Ahmed

Hyderabad, Telangana, India

syedaamairshareef@gmail.com | linkedin.com/in/syed-aamair | github.com/GOLDSTEALTH

TECHNICAL SKILLS

Cloud & IaC: AWS, Microsoft Azure, Terraform, Ansible, LocalStack

CI/CD & Containers: Docker, Jenkins, Git, GitHub Webhooks, Kubernetes (Foundations)

Languages & Scripting: Python, Bash/Shell Scripting, C#, Kotlin

Systems & Environments: Linux (Ubuntu), WSL 2, REST APIs, WebSockets

EDUCATION

Shadan College of Engineering & Technology

B.Tech in Computer Science Engineering (AI & ML)

Expected 2028

Hyderabad, India

EXPERIENCE & TRAINING

Creator & Lead DevOps Engineer

Project: ShadowPlane

July 2026 – Present

Hyderabad, India

- Engineered an event-driven CI/CD interception gateway to dynamically sandbox, test, and validate Infrastructure-as-Code (Terraform) pre-deployment.
- Built a deterministic execution environment using Docker and LocalStack to simulate AWS API failures without exposing live cloud credentials.
- Developed a Python FastMCP logic engine that parses runtime telemetry and automates HCL code patching via API integrations.

DevOps Engineer Intern

Qspiders CampusConnect

July 2026 – Present

Hyderabad, India

- Configured and maintained deployment pipelines, utilizing Git and Jenkins for continuous integration workflows.

DevOps & Cloud Infrastructure Consultant

Freelance & Deen-Labs.tech

Aug 2025 – Present

Hyderabad, India

- Architected multi-cloud infrastructure environments on AWS and Microsoft Azure using Terraform and Ansible.
- Containerized legacy applications using Docker, streamlining deployment workflows and ensuring consistent environments across the infrastructure.

AWS & Cloud Computing Trainee

Cloud Infotech Solutions

May 2025 – July 2025

Hyderabad, India

- Achieved cloud infrastructure certification, focusing on EC2, S3, IAM, and VPC provisioning and network routing.
- Deployed a Python-based banking application by integrating a comprehensive DevOps toolchain to establish automated CI/CD processes.

INFRASTRUCTURE & ENGINEERING PROJECTS

Bare-Metal NAS Server | *Linux, Networking, Disk Management*

- Repurposed bare-metal hardware into a custom Network-Attached Storage server, provisioning physical drives and configuring local network routing on an open-source Linux stack.

Native Android DNS Firewall | *Kotlin, VpnService, Networking*

- Engineered a mobile firewall utilizing Android's VpnService to intercept and filter DNS queries, enforcing strict domain-level blocking rules.
