PROFESSIONAL SUMMARY

Results-driven Multi-Cloud & DevOps Engineer specializing in autonomous CI/CD pipelines, Infrastructure-as-Code sandboxing, and scalable systems architecture. Proven experience engineering custom cloud simulations, containerizing legacy applications, and deploying robust bare-metal servers. Strong background in Python, Kotlin, and full-stack integration, seeking to drive high-availability infrastructure initiatives.

TECHNICAL SKILLS

- **Cloud & IaC:** AWS, Microsoft Azure, Terraform, Ansible, LocalStack
- **CI/CD & Containers:** Docker, Jenkins, Git, GitHub Webhooks, Kubernetes (Foundations)
- **Languages & Scripting:** Python, Bash/Shell Scripting, React
- **Systems & Environments:** Linux (Ubuntu), WSL 2, REST APIs, WebSockets, Android (VpnService, Accessibility)

EDUCATION

Shadan College of Engineering & Technology Expected 2028
B.Tech in Computer Science Engineering (AI & ML) | Hyderabad, India

EXPERIENCE & TRAINING

Creator & Lead DevOps Engineer July 2026 – Present
Project: ShadowPlane | Hyderabad, India

- Engineered an event-driven CI/CD interception gateway to dynamically sandbox, test, and validate Infrastructure-as-Code (Terraform) pre-deployment.
- Built a deterministic execution environment using Docker and LocalStack to simulate AWS API failures without exposing live cloud credentials.
- Developed a Python FastMCP logic engine that parses runtime telemetry and automates HCL code patching via API integrations.

DevOps Engineer Intern July 2026 – Present
Qspiders Campus Connect | Hyderabad, India

- Configured and maintained deployment pipelines, utilizing Git and Jenkins for continuous integration workflows.

DevOps & Cloud Infrastructure Consultant Aug 2025 – Present
Freelance & Deen-Labs.tech | Hyderabad, India

- Architected multi-cloud infrastructure environments on AWS and Microsoft Azure using Terraform and Ansible.
- Containerized legacy applications using Docker, streamlining deployment workflows and ensuring consistent environments across the infrastructure.

AWS & Cloud Computing Trainee May 2025 – July 2025
Cloud Infotech Solutions | Hyderabad, India

- Achieved cloud infrastructure certification, focusing on EC2, S3, IAM, and VPC provisioning and network routing.
- Deployed a Python-based banking application by integrating a comprehensive DevOps toolchain to establish automated CI/CD processes.

INFRASTRUCTURE & ENGINEERING PROJECTS

- **Deen-AI (Context-Aware Islamic Assistant & System Guardian):** Engineered a full-stack Android ecosystem (Kotlin, React) featuring a custom RAG pipeline with the Gemini API and Internet Archive to guarantee hallucination-free, domain-specific responses. Architected a dual-layer device protection system combining a native DNS firewall (VpnService) to proactively block NSFW network handshakes, and an explicit-consent Accessibility Service that terminates inappropriate applications in real-time. Integrated OpenMeteo API for dynamic location routing via Google Maps.
- **Bare-Metal NAS Server (Linux, Networking, Disk Management):** Repurposed bare-metal hardware into a custom Network-Attached Storage server, provisioning physical drives and configuring local network routing on an open-source Linux stack.
